Education

09/2021 - 05/2025

Ho Chi Minh City University of Technology

Major: Software Technology

Skills

Technical Skills

- **AI / Machine Learning**
- Machine Learning
- Deep Learning
- Model Training & Evaluation
- Data Preprocessing
- Model Optimization
- **Programming Languages :** C#, Java, Python, PHP
- **Frontend & Framework:** HTML/CSS/JS, Boostrap, Tailwind, Responsive Design
- **Backend:** PHP (MVC), Spring Boot, ASP.NET MVC, RESTful API
- **Database:** SQL Server, MySQL, MongoDB
- **Tools:** GitHub, Postman, JupyterNotebook, Visual Studio

Overview

My career goal is to become a full-stack web developer with a strong foundation in systems and software architecture. I focus on building high-performance, secure, and scalable web applications, while continuously improving my skills in backend development, databases, and system deployment. I proactively learn new technologies, optimize development processes, and aim to participate in large-scale projects that deliver tangible value to businesses.

Work Experience

FCJ Cloud Engineer / Backend Developer Trainee 01-09/2025

Amazon Web Services(AWS)

- Deploying a PHP web system in a production model on AWS.
- Design and implement a website project using a 3-tier architecture on AWS: Presentation Layer: CloudFront + S3, Application Layer: EC2 + Auto Scaling + ELB, Data Layer: RDS (MySQL/Aurora).
- Configuration and management: Amazon EC2 for deploying PHP applications, Amazon RDS for MySQL databases, and Amazon S3 for storing static files.
- Setting up a CDN using Amazon CloudFront helps speed up page load times globally.
- Configure the Load Balancer (Elastic Load Balancing) to ensure high availability.
- Manage your domain and DNS using Amazon Route 53.
- Secure your system with AWS WAF against web attacks.
- Backup & monitoring: Track system performance and optimize costs.

Full Stack Web Developer 05-09/2025

S&H Business Solution Co., Ltd.

- Analyzing business requirements and designing a website system to support events and product exhibitions for Korean businesses in Vietnam.
- Design and implement the system architecture, including the backend environment (PHP) and MySQL database.
- Build and organize the project using the MVC model, ensuring scalability and ease of maintenance.
- Develop the frontend user interface (UI/UX) for the event website: banner, landing page, header, footer, main content, etc.
- Design and develop functional modules: User management, Company management, Product management, Human resources, Product categories, Booths, Contact system, and Admin Dashboard.
- Develop an event registration system, integrating automatic email confirmation for users and administrators.
- Implement the system deployment to a production environment: domain and hosting on **inet.vn**.

Soft Skills

- Teamwork skills
- Problem-solving skills
- Office informatics
- Presentation skills
- Research skills

Certificates

- English: CEF B1
- Communication and teamwork skills

Achievements

Participate in scientific research **2023-2024**

Topic: Artificial intelligence is being used to predict diabetes using machine learning.

Achievement: School level **(First prize)**

Describe:

- Developing an improved iXGBoost model, achieving 99% accuracy in early prediction of diabetes.
- Optimize the model by applying techniques such as Random Sampling, SMOTE, and GridSearchCV.

Participate in the HDBank Hackathon competition **2024**

Topic: Applying artificial intelligence in credit risk assessment using Machine Learning.

Achievement: Consolation Prize

Participate in the Euréka scientific research **2024**

Join the Artificial Intelligence Challenge contest **2025**

Participating in the GSETS International Scientific **2025**

Participate in scientific research **2025**

Topic: Early diagnosis of Alzheimer's disease using Deep Learning combined with CNN and Attention Mechanism

Achievement: School level **(Third prize)**

Describe:

- CNN helps extract data features, while the Attention Mechanism identifies and focuses on the most important features, helping the model achieve 98% accuracy.

Projects

Automotive store management system **2023**

Describe: Design an e-commerce website to manage car dealership.

- CRUD products, users, chatbox realtime.
- Search, add to cart, and pay online with VNPay.
- Order status management, admin dashboard.

Technology in used:

- FE: HTML/CSS/JS, Bootstrap
- BE & DB: ASP.Net MVC, C#, SQL Server

Electronic component store management system **2024**

Describe: Design an e-commerce website to manage an electronics components store (similar to GEARVN).

Technology in used:

- FE: HTML/CSS/JS, Bootstrap
- BE & DB: Java, SpringBoot, MySQL

Online movie ticket booking management system **2025**

Describe: Designing an online movie ticket booking website using **AWS** (Amazon Web Service) services based on a 3-tier model.

- Payment methods include VNPay, MoMo, Stripe, etc.
- User management and permissions
- Manage theaters, rooms, seats, food and beverage packages, etc.

Technology in used:

- FE: HTML/CSS/JS, Bootstrap
- BE & DB: PHP, MySQL
- AWS Cloud: EC2, RDS, WAF, CloudFront, ELB, S3,...

GFAIR Korea Vietnam - Korea Exhibition and Event System **2025**

Describe: Introducing the event, a list of participating businesses, and their products.
